

STRETCH CEILING

(Powered by PANDORA)

Stretch Ceiling is an innovative architectural ceiling system that uses a lightweight, flexible membrane tensioned within a perimeter profile to create a seamless and elegant ceiling surface. It offers exceptional design flexibility, allowing integration of concealed lighting, custom printing, curves, shapes, colours and various finishes to transform ceilings into distinctive architectural features.

Pandora Stretch ceiling made in Germany based PVC base with Translucent fabric on self- supporting PVC frame profile.

Type 1

Translucent ceiling

A translucent stretch membrane can act as a diffuser for concealed LED lighting. For a refined luminous result, the membrane, LED pitch, cavity depth and control system should be designed together. Options can include fixed white, dimmable, tunable-white and RGB/RGBW lighting, subject to the selected system.

TYPE 2

PRINTED CEILING

PRINTED STRETCH CEILINGS CAN REPRODUCE SKIES, CLOUDS, BOTANICAL IMAGERY, ARTWORK, PATTERNS OR PROJECT-SPECIFIC GRAPHICS. THE VISUAL LAYER CAN BE COMBINED WITH BACKLIGHTING TO CREATE A LUMINOUS IMAGE OR AN ATMOSPHERIC 'WINDOW' EFFECT.
